

## Drinking bowl for birds

Looking at around you can see a seed-can in each garden or park. The birds' friends care on their food and even do not forget various useful additives. However, nobody thinks on drinking bowls for birds and they are needed to eat cool food. It is harmful! I decided to take a mission to correct the situation making an original drinking bowl for birds.

Why the drinking bowl is unique? - You can ask. The secret is in the things, which it was made from.

After reviewing different stuffs in my studio I found a broken floor vase, a cracked plate and a burned pan. It is wonderfully useful "garbage".

I started assembling a "pyramid" putting one item on the top of the other, changing their places, shuffling and turned them. Finally, the nice shape was received.

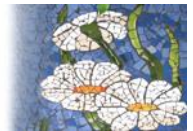

I glued the items with ceramic glue and left the "pyramid" for drying.

I covered the product with a tile pattern. Only three colors were used for the mosaics: white, gray and red. I wished to create the light and bright drinking bowl.

# Dina's Art Works

Mosaic, Decoupage, Painting

It only remained to fill the drinking bowl with water and to wait birds.

The mosaic pattern covers both out- and inside of the bowl. The birds will accustom to drink from the nice dish!
