

## Magic of the bead mosaic

As is known, for the mosaic making you can use almost every material that comes handy. Beads is a great decorative material. It attracted the masters' attention from immemorial time. Such an original technique can be used for any item (e.g vases and figurines) decorating or for the Easter eggs and boxes inlaying.

### **To make a mosaic of beads you will need:**

1. The desire to make this interesting, but very laborious affair.
2. The subject for decorating.
3. The beads of different sizes and colors, spangles, sequins, rhinestones - at your notice.
4. Any dense and elastic glue (e.g., silicone).
5. Tools: pliers, small tweezers, thin needle and thread.

## Mosaic making

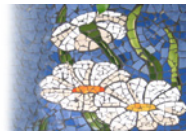

You can use the beads only or "defuse" the mosaic with the inserts of spangles or cheap jewelry. The cheap jewelry should be "dismantled for parts" - chains, stones, pendants - all will be useful for the mosaic.

***The expert advice:*** Don't need to prime the object for the mosaic, unless you really want to change the color - it will shine between the beads and create the effect of background.

Apply a little glue to a small area of the object. Take one bead with the tweezers and press it into the adhesive. The bead can be moved or rotated using a toothpick.

Beads can be put with a hole to the top or to the side creating a different texture. If you need to put the beads in the “snake” form, it will be convenient pre-strung them on a thread and then to glue entirely.

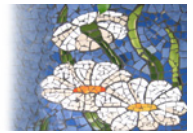

After the work finishing wait for the glue complete drying. Now you need to check the quality: palpate, pull and stir each bead - if some beads fall off, glue them again.

# Dina's Art Works

Mosaic, Decoupage, Painting

The mosaically decorated subject will be a great and stylish addition to any interior. magically transforms even the most ordinary interior. Unique ornaments and unusual floral motifs will attract by their refinement and tremendous impression from the bright beads.
