

## Flower Pot "Summer"

The ordinary ceramic pots are good because you can decorate them as you like - paint, paste over it any available materials, wrap the ropes or cords, whichever is more suitable for your decor.

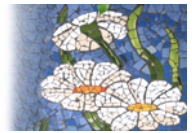

All the mosaic pots in my home are handmade and hence unique. Presently, I'll show you how to make a bright and cheerful pot "Summer".

The basis is a ceramic pot of unfired clay 25 cm in height.

First of all, I drew a pattern, paint it with a dry pastel and then sprayed acrylic paint over its surface to avoid chalk erasing during the further work.

For the mosaics I used ceramic tiles, colored plates of suitable thickness and marbles.

All the constituents were cut with the special pliers and glued with the ceramic glue.

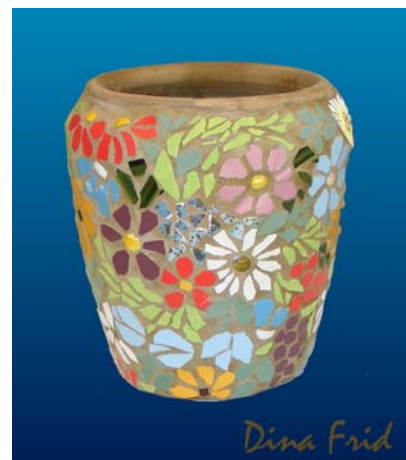

The pattern is ready. It remains to put the grout, wait when it dries and clean it. In 10 minutes, you can clean the excess grout from the surface of the mosaic pattern.

Do this gently by rubbing with a damp sponge, rinsing it often while the grout is still wet. Leave the product for half an hour until the grout will be cured and a hazy film will be created over the mosaic surface. Polish this film away by rubbing using a clean, dry cloth. The grout will be completely dry in 2-3 hours.

After the grout final drying, I covered the pot surface with a liquid “sealer”, which is the agent protecting the product against moisture and strengthening it.

### The view of the ready pot from different sides

**Treat your house, decorate it with mosaic pots and vases. Give yourself the joy.**
